## **WARRANTY**

PHS Industries Inc. (“PHS”) warrants to the original buyer (the “Buyer”) of products manufactured by it that all such products will be free from defects in material and workmanship for a period of one (1) year after the date of shipment when used in the manner and for the purpose recommended by PHS. PHS does not warrant goods manufactured by other parties, except to the extent that such goods are covered by a warranty to PHS. Notice of a claim for a breach of a warranty must be given to PHS within thirty (30) days after the date that the Buyer first has knowledge of an alleged breach of warranty, but in no event later than one (1) year after the date of shipment. PHS’s obligations under this Warranty are limited to its repair or replacement of those products that it determines, to its satisfaction, are defective, and it shall not be liable for any charge or expense incurred by the Buyer in repairing or replacing said products. Notwithstanding anything else contained herein to the contrary, PHS’s liability under this Warranty for defective products is limited to the net sales price of such products. The foregoing constitutes the Buyer’s sole and exclusive remedy for defective products.

In the event that PHS provides engineering design or fabrication services, the Buyer’s acceptance of PHS’s design or delivery of the products shall relieve PHS of all further obligations with respect to such design and fabrication, except to the extent that PHS may otherwise expressly provide in a product warranty. In no event, shall PHS be responsible for design errors due to inaccurate or incomplete information provided by the Buyer or its representatives. PHS reserves the right to revise product design without notification.

THIS WARRANTY IS IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE OR ANY OTHER MATTER. IN NO EVENT AND UNDER NO CIRCUMSTANCE SHALL PHS BE LIABLE FOR (A) PERSONAL INJURY OR PROPERTY DAMAGES OR (B) CONSEQUENTIAL, SPECIAL OR INCIDENTAL DAMAGES, WHETHER FOR BREACH OF CONTRACT OR WARRANTY, NEGLIGENCE OR ANY OTHER TORTIOUS ACT OR OMISSION. THIS WARRANTY SHALL NOT APPLY TO PRODUCTS THAT HAVE BEEN SUBJECT TO ALTERATION OR REPAIR MADE BY A PARTY OTHER THAN PHS, ACCIDENT, ABUSE, OR MISUSE. THIS WARRANTY SUPERCEDES ALL CONTRARY OBLIGATIONS IMPOSED ON PHS BY ANY PURCHASE ORDER.

The terms of this Warranty may not be modified or changed except by a writing signed by an authorized officer of PHS.

## INDEX

**PHS Industries** is a complete line manufacturing and engineering organization offering pipe hangers, supports, restraints and specialty devices to support and control piping and equipment used in fossil power generating stations, petro-chemical plants, and other industrial processing piping systems. In addition to our product line, representing one of the most complete in the industry PHS provides complete engineering and technical services, including analysis, hanger design and detailing, and other construction support programs. To provide effective distribution of our products and services, engineering and sales offices are maintained in major cities throughout the continental United States.

This new catalog, illustrating our hardware product line, incorporates some design changes and expanded sizes in previous products along with additional concepts to meet current industry and code requirements.

### GENERAL NOTES

Outline dimensions and data shown in this catalog are for reference only and are not intended for inspection purposes.

Designs and dimensions are subject to change without notice.

All hanger products shown herein are manufactured in accordance with industry standards and are for installation and service as described. When used for other purposes or in ways other than those for which designed and manufactured, PHS cannot be held responsible for product failure, injuries, or property damage.

Cataloged products meet requirements of MSS-SP-58 and MSS-SP-69.

Maximum rated loads for hangers are based on a safety factor applicable to the codes listed in this catalog or the allowable stresses specified in ASME B31.1, ASME B31.3, and MSS-SP-58.

## INTRODUCTION

PHS markets the widest selection of restraint assemblies and devices which allows the designer to select devices technically and economically suited for the specific application by type, size and configuration.

PHS restraint systems now cover a broader range of load ratings and allow greater flexibility in field adjustment. High precision steel ball bushings and pins are now standard components throughout the line. Also included is a new series of restraint yoke clamps.

PHS hydraulic snubbers have also been improved and are available with options to better suit the different conditions the application requires.

## SPECIFICATIONS

All PHS restraints are designed to meet requirements of: Manufacturers Standardization Society SP-58, Manufacturers Standardization Society SP-69 and ASME Code for Pressure Piping ASME B31.1 and Process Piping ASME B31.3.

## RIGID STRUT ASSEMBLIES

**RECOMMENDED SERVICE:** Used to restrain movement of piping in one direction. Movement due to thermal expansion in other directions should be evaluated.

### STANDARD DESIGN FEATURES:

- Designed to restrain tensile and/or compressive forces.
- Tight fitting connections allow positive control of piping systems.
- Spherical, self-aligning ball bushing at both ends of the strut allow for  $\pm 5^\circ$  of angular motion or misalignment.
- Can be installed in any spatial orientation.
- Field adjustment is available in all assemblies.
- All welding work required in the field is recommended to be fillet welds.
- Paint — Standard primer finish.

## HYDRAULIC SNUBBER ASSEMBLIES

**GENERAL APPLICATION:** Used for the control and protection of piping and equipment subject to shock (impulse) loading and swaying (cyclic) conditions. Its use transfers any imposed forces on the piping or equipment directly to the building structure at the instant of shock occurrence, while at all other times allowing free unrestricted movement through its normal operating range.

### SPECIFIC APPLICATIONS:

- Earthquake protection.
- To prevent damage by wind in outdoor installations.
- Employed at points in piping systems subject to shock loadings generated by quick closing valves, water hammer, relief valve reaction or other applied shock loads.

### STANDARD DESIGN FEATURES:

- Piping and/or equipment movement is controlled by tamper-proof dual stage flow control poppets designed with self-cleaning orifices.
- Furnished as a complete, compact, and efficient unit, ready for immediate use.
- Manifold configuration requiring no external piping.
- Spherical, self-aligning ball bushings allow for  $\pm 5^\circ$  of angular motion or misalignment.
- Pressurized hydraulic reservoir allows mounting in any spatial orientation.
- Virtually no resistance to normal thermal movements of the piping.
- Paint — standard primer finish.
- Large restraining forces compared to size.
- Functions in restraining tension and compression.
- Stroke determination is made from built-in-datum point located on piston rod wrench flats.
- Fluid Level Indicator — Provides concise determination of exact fluid level in the unit, thereby eliminating estimate of reserve fluid level.

### OPTIONAL DESIGN FEATURES:

- Remote Reservoir Mounting — The snubber's pressurized reservoir can be remotely mounted for snubber locations that are difficult to reach.
- Integral Relief Valve — A non-adjustable valve, which is factory preset at 133%, or 200% of rated load.
- Protective Boot — Installed over the piston rod for protection in corrosive and/or dusty areas.
- Rigid Strut Application — When no thermal growth is anticipated after lock-up an optional poppet valve, without bleed, is furnished. Must be ordered with optional integral relief valve.

*For information concerning PHS snubbers and snubber assemblies please contact your local PHS Industries sales office.*

## STRUCTURAL ATTACHMENT

**Figure 1000**

**Size Range:** 700 through 130,000 pounds (3,114 N through 578,240 N) load.

**Material:** Carbon steel except load pin which is stainless steel.

**Service:** For attachment of struts to structures.

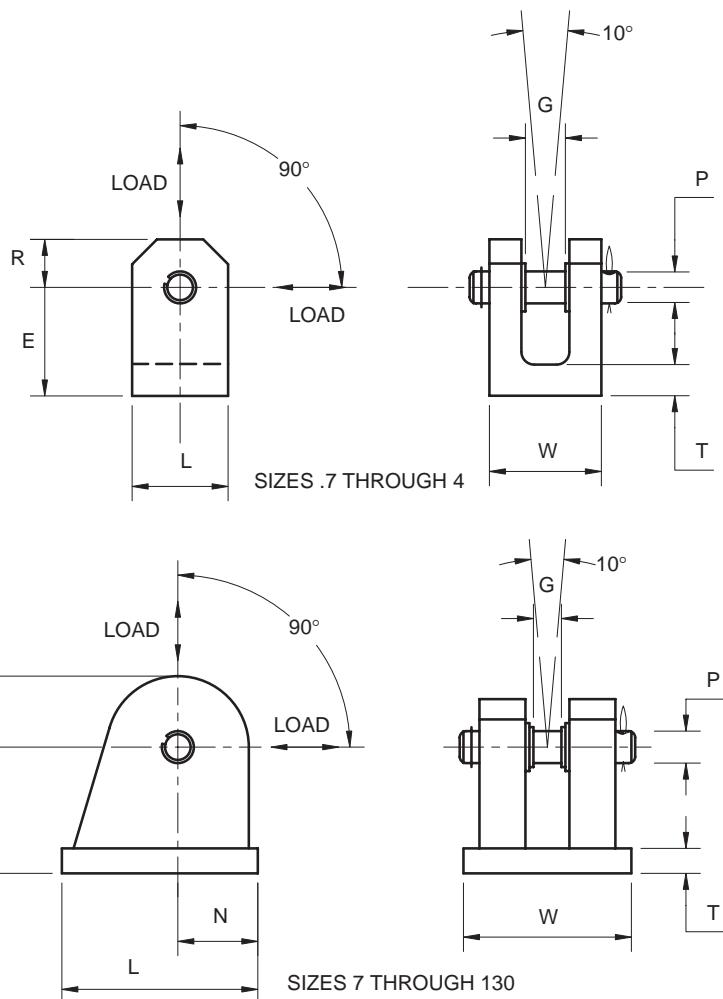

**Maximum Temperature:** 350°F (177°C) for the rated loads shown.

**Features:** Can be used as a second end attachment.

**Used With:** Figures 2015, 2250, 2252, 2525, 2530.

**Ordering:** Specify figure number and size. For Metric applications specify Figure M1000 and size.

**NOTE:** This product is designed to function with a 10° cone of action, and a 90° arc of loading. Loading beyond this cone or arc is not recommended.

**FIGURE 1000 – STRUCTURAL ATTACHMENT**

## STATIC AND DYNAMIC RESTRAINTS

**LIGHT DUTY  
RIGID ROD STRUT****Figure 2015**

**Size Range:** 700 to 4,000 pounds (3,114 N to 17,792 N) load.

**Material:** Carbon steel except load pin which is stainless steel.

**Service:** For rigid restraint applications where short pin to pin dimensions are required.

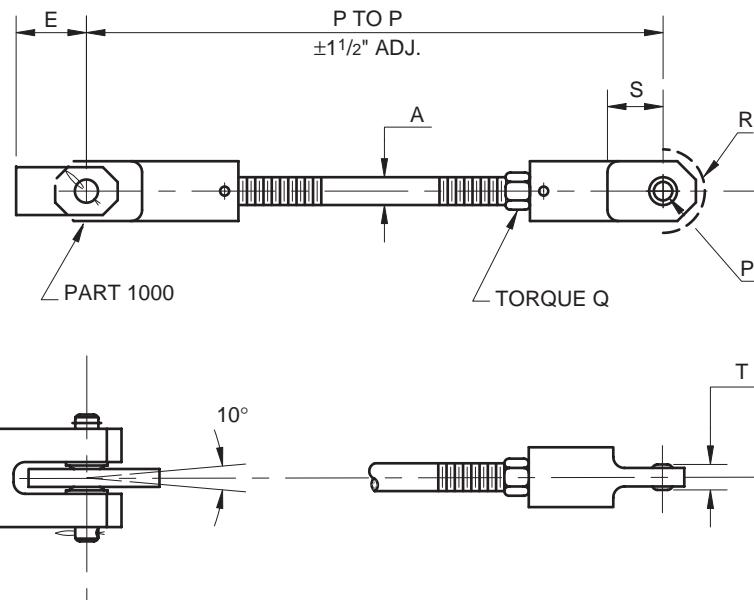

**Installation:** Securely fasten end bracket to structure. Screw rod into paddles and adjust for the desired overall length. Fasten strut to pipe attachment (in place). After all minor adjustments are made the unit is locked by tightening the hex nut against the paddle.

**NOTE:** Rods should be visible in paddle sight holes to insure proper thread engagement.

**Field Adjustment:** Plus or minus 1½ inch (38 mm).

**Used With:** Figures 6175, 6202, 6222, 6252.

**Ordering:** Specify figure number, size, strut length (pin to pin length) and customer mark number (if any). Restraint attachments must be ordered separately. For Metric applications specify Figure M2015.

**FIGURE 2015– LIGHT DUTY RIGID ROD STRUT**

**ADJUSTABLE RIGID STRUT****Figure 2250**

**Size Range:** 700 to 130,000 pounds (3,114 N to 578,240 N) load.

**Material:** Carbon steel except load pin which is stainless steel.

**Service:** For rigid restraint applications allowing the greatest amount of field adjustment without field welding.

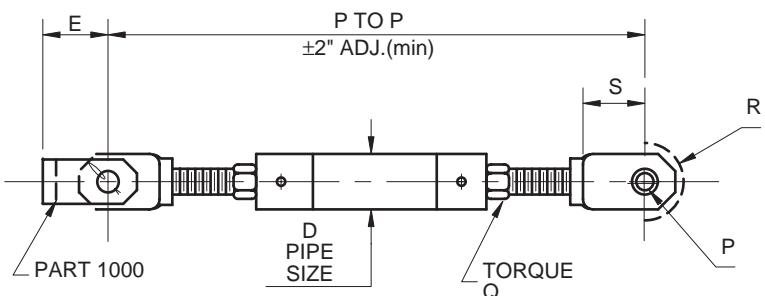

**Installation:** Securely fasten end bracket to structure. Attach strut paddle to end bracket. Adjust strut for the desired overall length. Fasten strut to pipe attachment (in place). After all minor adjustments are made, the unit is locked by tightening the hex nuts against the extension piece.

**NOTE:** Rods should be visible in the sight holes at each end of the strut to assure proper thread engagement. Special lengths or other increments available upon request.

**Field Adjustment:** Plus or minus two inches (51 mm) (minimum).

**Used With:** Figures 6175, 6202, 6222, 6252.

**Ordering:** Specify figure number, size, strut length (pin to pin length) and customer mark number (if any). For Metric applications specify Figure M2250.

## STATIC AND DYNAMIC RESTRAINTS

**FIELD WELDED ADJUSTABLE RIGID STRUT****Figure 2252**

**Size Range:** 700 to 130,000 pounds (3,114 N to 578,240 N) load.

**Material:** Carbon steel except load pin which is stainless steel.

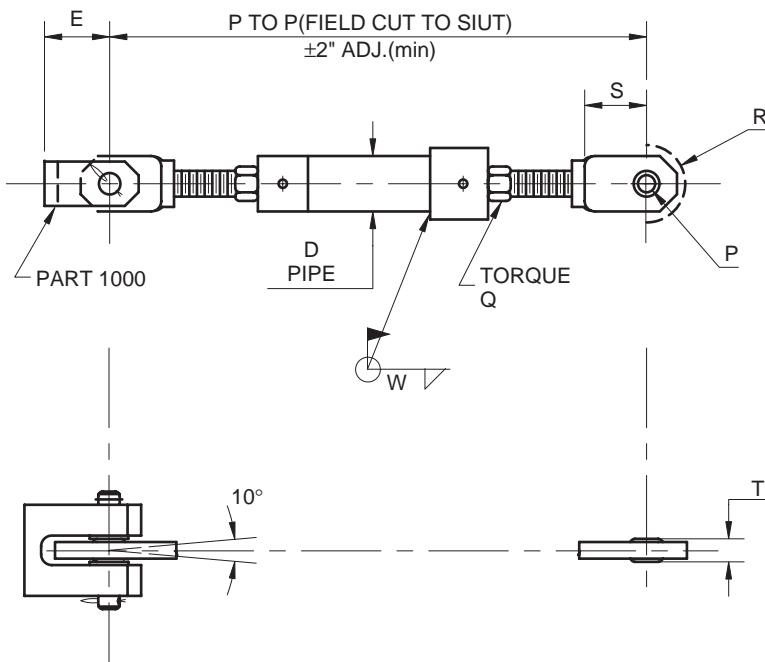

**Service:** For rigid restraint applications where pin to pin dimension is to be determined in the field. All struts will be shipped at maximum pin to pin dimension.

**Installation:** Determine pin to pin dimension, cut strut tube to required length and weld adapter end to strut. Securely fasten end bracket to structure. Adjust strut to desired overall length. Fasten strut to pipe attachment (in place). After all minor adjustments are made, the unit is locked by tightening the hex nuts against the extension piece.

**NOTE:** Rods should be visible in the sight holes at each end of the strut to assure proper thread engagement. One end shipped loose for field welding.

**Field Adjustment:** Plus or minus four inches (102 mm) after final welding.

**Ordering:** Specify figure number, size, and customer mark number (if any). For Metric applications specify Figure M2252.

For sizes and dimensions refer to Figure 2250 on page 5. For sizes 60 thru 130 insert field weld adapter into pipe 1" and weld.

## VIBRATION CHECK-SWAY BRACES

PHS Industries has designed its units into six sizes, based on past experience, relating to specific pipe sizes. In general, we recommend the use of these sizes.

**Size Range:** Preloads from 60 to 2,000 pounds (267 N to 8,896 N) up to maximum forces of 240 to 8,000 pounds (1,068 N to 35,584 N).

**Service:** For controlling vibration, to prevent externally caused pipe sway, as an energy resisting device to oppose shock forces and as a guide or restraint to control pipe line movements.

**Temperature:** 350°F (177°C) for all components except pipe clamp and temperature effect on spring coil.

### Features:

- Compact and suitable for use in a confined space.
- Each size has 3" (76mm) of travel in either direction.
- All steel construction to protect the spring against damage and weather conditions.
- Nameplate and movement indicator plate are anti-corrosive. These plates are mechanically fastened to prevent accidental removal.
- Paint — standard primer finish.
- Rod coupling allows for field adjustment.

**Optional Feature:** Corrosion Resistant — available for protection against moderate corrosive conditions or severe weather. The unit is galvanized, per ASTM A-153, except the spring which is neoprene coated. The final closure weld at time of assembly is metalized.

**Specifications:** All PHS Industries Vibration Check-Sway Braces are designed to meet the requirement of:

- Manufacturers Standardization Society SP-58
- Manufacturers Standardization Society SP-69, and ASME Code for Pressure Piping ASME B31.1 and ASME B31.3.

**Type Selection:** Specify a Figure 2303 where adjustability of the preload is desired. In most other cases a Figure 2300 is usually sufficient.

**Size Selection:** The size of the vibration check-sway brace is determined by calculating the amount of resistive force required by the sway brace to overcome the inertia force of the vibrating object. This is done by taking into consideration the mass, amplitude, frequency and angle of approach of the sway brace from the axis of movement.

**How to Size Assemblies:** The Figures 2301 and 2304 assemblies are recommended where the pin to pin dimensions are small. For assemblies with large pin to pin dimensions, use the Figure 2302 or 2305 assemblies. Refer to the individual assemblies for maximum lengths.

**Final Setting:** The sway brace should be in the neutral (zero force) position when the system is HOT and operating. If not, the rod coupling must be turned to readjust to the neutral position.

**Ordering:** Specify figure number, size, pipe size, preload and length (pin to pin length), customer mark number (if any). Pipe clamp, Figure 6180, must be ordered separately. For Metric applications specify Figures M2300, M2301, M2302, M2303, M2304, M2305.

## SWAY BRACE PIPE CLAMP

**Figure 6180**

**Size Range:** 2 through 24 inches (50 mm to 600 mm).

**Material:** Carbon Steel

**Finish:** Plain

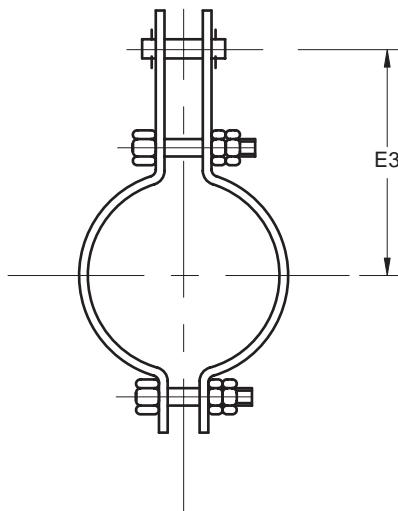

**Service:** For use with our standard line of sway brace assemblies only, in the control of vibration and shock loading.

**Maximum Temperature:** 650°F (343°C) for rated loads shown.

**Features:** Tight fitting load pin.

**Size Selection:** See the chart shown below to match the appropriate clamp to the desired sway brace assembly.

**Ordering:** Specify figure number and pipe size. For Metric applications specify Figure M6180.

**FIGURE 6180 – SWAY BRACE PIPE CLAMP**

## STATIC AND DYNAMIC RESTRAINTS

### HYDRAULIC SHOCK AND SWAY ARRESTORS

The PHS Hydraulic Shock and Sway Arrestor is a manifold design hydraulic component consisting of a high pressure main cylinder, a flow control section which contains dual stage velocity sensitive poppet valves, and a spring biased air/oil interface hydraulic reservoir.

**General Application:** Used for the control and protection of piping and equipment subject to shock (impulse) loading and swaying (cyclic) conditions. Its use transfers any imposed forces on the piping or equipment directly to the building structure at the instant of shock occurrence, while at all other times allowing free unrestricted movement through its normal operating range.

#### Specific Applications:

- Earthquake protection.
- To prevent damage by wind in outdoor installations.
- Employed at points in piping systems subject to shock loadings generated by quick closing valves, water hammer, relief valve reaction or other applied shock loads.

**Basic Operation:** The piston rod is free to move in either direction with no restrictions to the fluid flow for all piston velocities up to the activation velocity. At activation velocity the poppet valve, internal to the snubber, closes. Closure of the poppet in either tension or compression greatly reduces the fluid flow through the valve, increasing the pressure on the operating side of the cylinder and generating a resistance force. Post activation flow through grooves in the poppet at rated design capacity of the unit is termed the "bleed rate." When the applied velocity of the unit becomes zero the poppet valve opens once again, allowing free piston movement.

More detailed information and brochures concerning the PHS Hydraulic Shock and Sway Arrestor are available upon request from your nearest PHS sales office.

#### Standard Design Features:

- Piping and/or equipment movement is controlled by tamper-proof dual stage flow control poppets designed with self-cleaning orifices.
- Furnished as a complete, compact, and efficient unit, ready for immediate use.
- Designed for continuous operation up to 200°F (93°C).
- Manifold configuration requiring no external piping.
- Spherical, self-aligning ball bushings allow for ± 5° of angular motion or misalignment.
- Pressurized hydraulic reservoir allows mounting in any spatial orientation.
- Virtually no resistance to normal thermal movements of the piping.
- Paint — standard primer finish.
- Large restraining forces compared to size.
- Functions in restraining tension and compression.
- Stroke determination is made from built-in-datum point located on piston rod wrench flats.
- Fluid Level Indicator — Provides concise determination of exact fluid level in the unit, thereby eliminating estimate of reserve fluid level.

#### Optional Design Features:

- Remote Reservoir Mounting — The snubber's pressurized reservoir can be remotely mounted for snubber locations that are difficult to reach.
- Integral Relief Valve — A non-adjustable valve, which is factory preset at 133%, or 200% of rated load.
- Protective Boot — Installed over the piston rod for protection in corrosive and/or dusty areas.
- Rigid Strut Application — When no thermal growth is anticipated after lock-up an optional poppet valve, without bleed, is furnished. Must be ordered with optional integral relief valve.

#### Standard Settings:

Locking (Activation Velocity) 10in/min. ± 3 in/min.  
(254mm/min. ± 76 mm/min.).

Bleed Rate (Post Activation at Rated Design Capacity)  
2-8 in/min. (51 mm-203mm/min.).

These performance characteristics vary due to temperature effects on the viscosity of the hydraulic fluid beyond an ambient temperature of 68-70°F (20-21°C).

**Factory Preset:** The units are shipped from the factory complete, tested, reservoir filled to capacity and piston rod pre-set to mate with pin to pin installation dimension. To determine factory pre-set dimension perform the following calculations.

#### Compression Stroke:

$$\text{Pre-Set} = \frac{\text{Pre-Set}}{\text{Max.}} - \left( \frac{\text{Cylinder Stroke} - \text{Thermal Mvt.}}{2} \right)$$

#### Tension Stroke:

$$\text{Pre-Set} = \frac{\text{Pre-Set}}{\text{Max.}} + \left( \frac{\text{Cylinder Stroke} - \text{Thermal Mvt.}}{2} \right)$$

## SHORT STRUT HYDRAULIC SNUBBER

**Figure 2525**

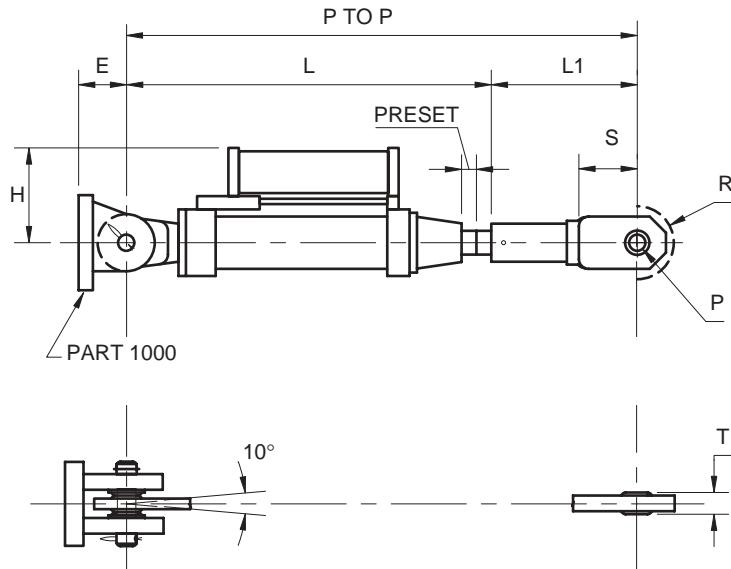

**Size Range:** Available in seven sizes from 3,000 to 130,000 pounds (3,114 N through 578,240 N) load and stroke lengths of 6, 12, and 18 inches (152 mm, 305 mm, and 457 mm).

**Service:** For dynamic restraint applications requiring the smallest overall assembly length in tight fit applications.

**Piston Rod Setting:** The factory will preset and clamp the piston rod at the proper cold installing stroke position. Unless specified otherwise, this setting will position the piston so that its calculated thermal movement will straddle the mid-stroke position of the unit, giving equal reserve at each end of the stroke. See Installation Instructions to determine or change piston rod setting.

**Used With:** Figures 6175, 6202, 6222, 6252.

**Ordering:** Specify figure number, size, cylinder stroke, thermal movement and direction (tension or compression), preset, overall assembly length (pin to pin length), options (if any), and customer mark number (if any). Restraint attachments must be ordered separately. For Metric applications specify Figure M2525.

## STATIC AND DYNAMIC RESTRAINTS

## ADJUSTABLE STRUT HYDRAULIC SNUBBER

Figure 2530

**Size Range:** Available in seven sizes from 3,000 to 130,000 pounds (3,114 N through 578,240 N) and stroke lengths of 6, 12, and 18 inches (152 mm, 305 mm, and 457 mm).

**Service:** For dynamic restraint applications allowing the greatest amount of field adjustment or where the exact overall length must be determined on-site.

**Used With:** Figures 6175, 6202, 6222, 6252.

**Ordering:** Specify figure number, size, cylinder stroke, thermal movement and direction (tension or compression), preset, overall assembly length (pin to pin length), options (if any), and customer mark number (if any). Restraint attachments must be ordered separately. For Metric applications specify Figure M2530.

## ON-AXIS RESTRAINT YOKE CLAMPS

**Figure 6175**

**Size Range:** 700 to 130,000 pounds (3,114 N through 578,240 N) load.

**Material:** Carbon steel except U-bolt and load pin, which are alloy steel.

**Finish:** Plain

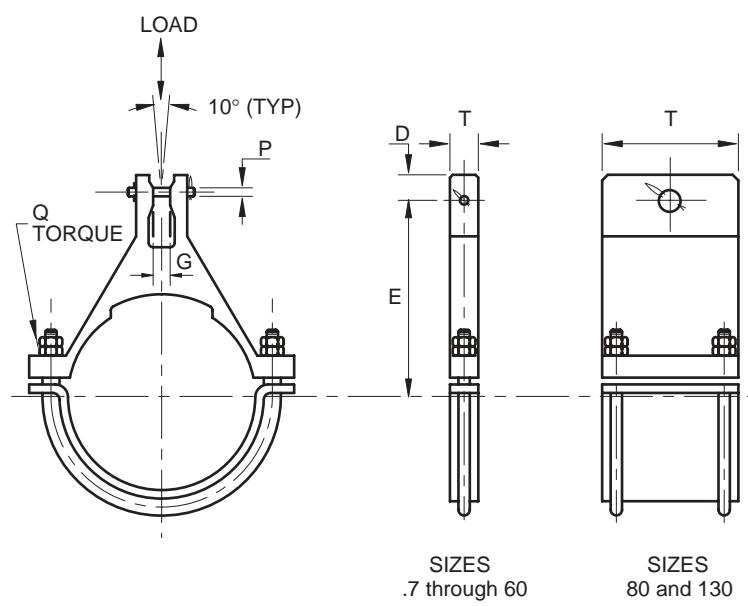

**Maximum Temperature:** 650°F (343°C).

**Service:** For non-integral on-axis attachment to the piping system in restraint applications.

**Used With:** Figures 2015, 2250, 2252, 2525, 2530.

**Ordering:** Specify figure number, load size and pipe size. Strut assembly must be ordered separately. For Metric applications specify Figure M6175.

**NOTE:** This clamp is designed to function within a 10° cone of action, perpendicular to the pipe. Loading beyond this cone is not recommended.

## RESTRAINT PIPE CLAMPS

### Figure 6202 — Carbon Steel

**Size Range:** 700 to 130,000 pounds (3,114 N through 578,240 N) of force in various pipe sizes from  $\frac{3}{4}$ " (20 mm) through 36 inches (900 mm).

**Material:** Carbon steel except the load pin which is alloy steel.

**Service:** For non-integral on-axis attachment to the piping system in restraint applications.

**Maximum Temperature:** 650°F (343°C) for the rated loads shown.

#### Features:

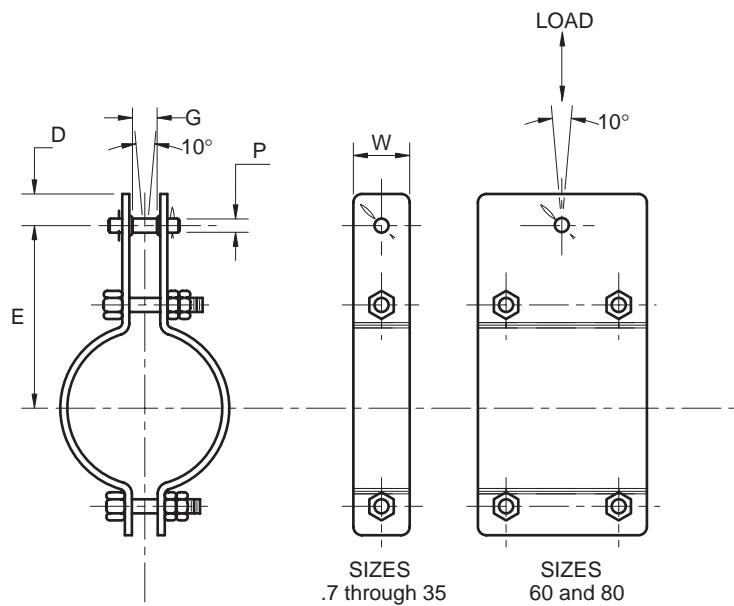

- Designed for use with spherical ball bushings.
- Tight tolerances provide for low lost motion.
- Interchangeable with a variety of PHS struts.

**Used With:** Figures 2015, 2250, 2252, 2525, 2530.

**Ordering:** Specify figure number, load size, and pipe size. Strut attachment must be ordered separately. For Metric applications specify Figure M6202.

**Installation Note:** Tension bolts to remove slack, (while maintaining dim. "G") plus  $\frac{1}{2}$  turn of the nut. Then lock jam nut to full nut.

**NOTE:** This clamp is designed to function within a 10° cone of action, perpendicular to the pipe. Loading beyond this cone is not recommended.

### Figure 6222 — Alloy Steel

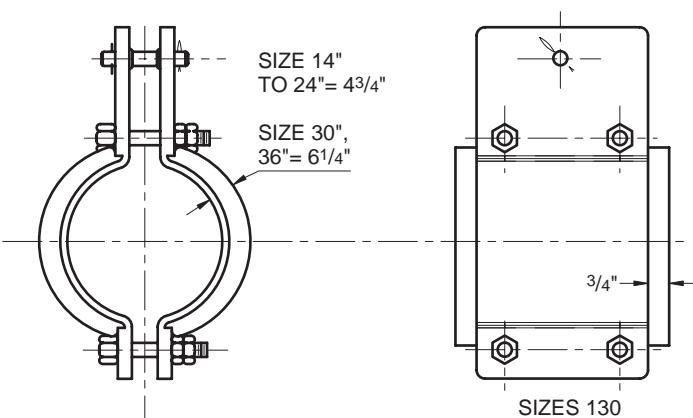

**Size Range:** Same as 6202 adjusted for temperature.

**Material:** Chrome molybdenum steel.

**Maximum Temperature:** 1100°F (593°C).

**Ordering:** Made special to customer order. Please contact your local PHS sales office for details. For Metric applications specify Figure M6222.

**NOTE :** Dimensions shown on following page do not apply.

## OFF-AXIS RESTRAINT PIPE CLAMP

**Figure 6252**

**Size Range:** 700 to 60,000 pounds (3,114 N through 266,880 N) of load in various pipe sizes from  $1\frac{1}{2}$ " (40 mm) through 36 inches (900 mm).

**Material:** Carbon steel except the load pin which is alloy steel.

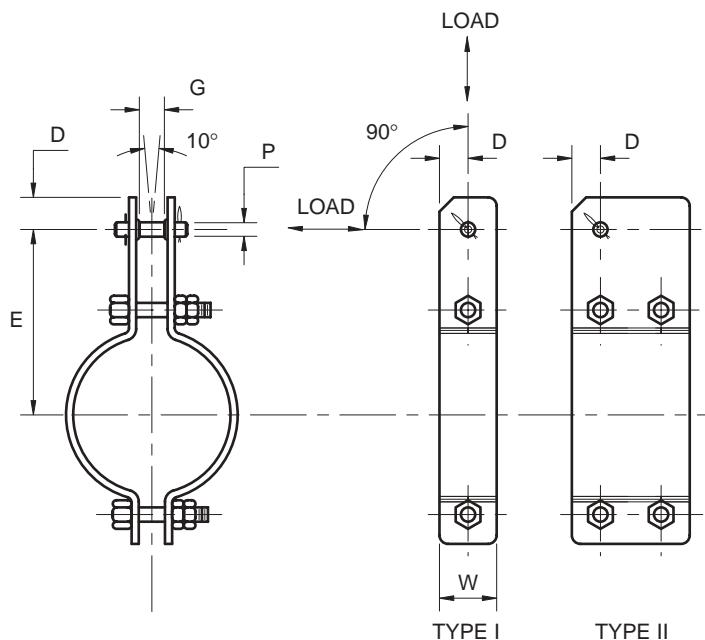

**Service:** For non-integral off-axis attachment to the piping system in restraint applications.

**Used With:** Figures 2015, 2250, 2252, 2525, 2530.

**Ordering:** Specify figure number, load size, and pipe size. Strut attachment must be ordered separately. For Metric applications specify Figure M6252.

**Installation Note:** Tension bolts to remove slack, (while maintaining dim. "G") plus  $\frac{1}{2}$  turn of the nut. Then lock jam nut to full nut. This product must be used with shear lugs supplied by others.

**NOTE:** This clamp is designed to function within a  $10^\circ$  cone of action and a  $90^\circ$  arc of loading. Loading beyond the cone or arc is not recommended.

## RESTRAINT RISER CLAMPS

**Figure 6280 — Carbon Steel**

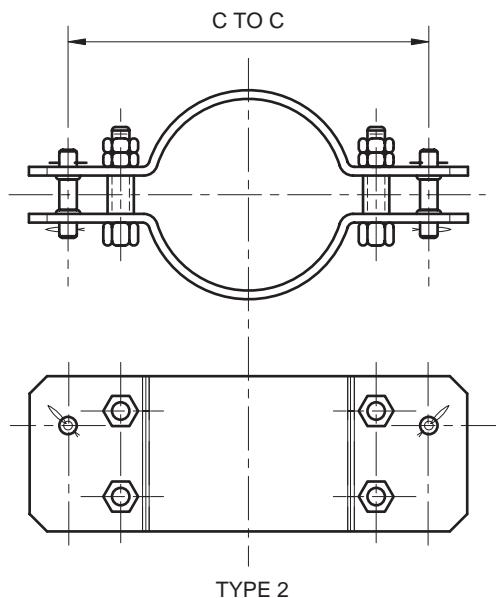

**Material:** Carbon steel except load pin which is alloy steel.

**Finish:** Plain.

**Maximum Temperature:** 650°F (343°C).

**Service:** For axial restraint of vertical or horizontal piping where two struts are required. Load is carried by shear lugs which are welded to the pipe.

**Ordering:** Specify figure number, exact pipe O.D., load, operating temperature, C-C dimension and strut size. Strut assembly must be ordered separately. For Metric applications specify Figure M6280.

**Figure 6281 — Alloy Steel**

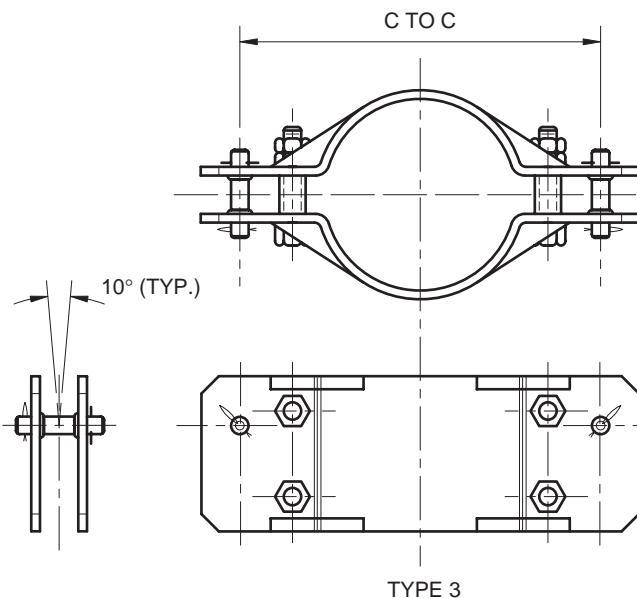

**Material:** Chrome molybdenum steel except load pin which is alloy steel.

**Finish:** Plain.

**Maximum Temperature:** 1100°F (593°C).

**Service:** For axial restraint of vertical or horizontal piping where two struts are required. Load is carried by shear lugs which are welded to the pipe.

**Ordering:** Specify figure number, exact pipe O.D., load, operating temperature, C-C dimension and strut size. Strut assembly must be ordered separately. For Metric applications specify Figure M6281.

## WELDING LUG ATTACHMENT

**Figure 6410**

**Size Range:** 700 to 60,000 pounds (3,114 N to 266,880 N) load for various pipe sizes from 1½" (40 mm) through 36 inches (900 mm).

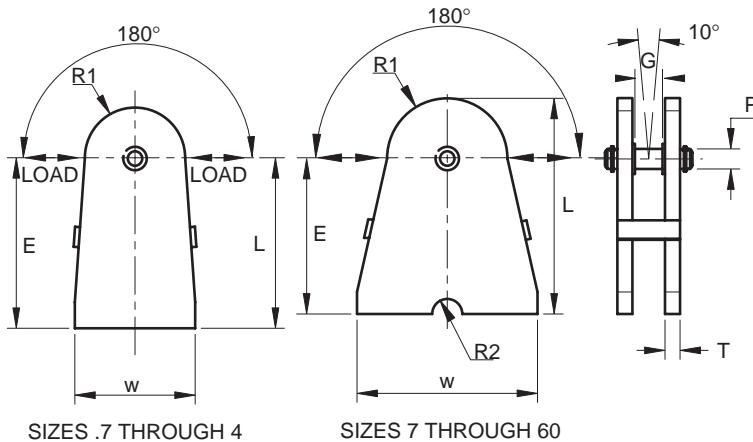

**Material:** Carbon steel except the load pin which is alloy steel.

**Service:** For integral attachment to a piping system in restraint applications.

**Maximum Temperature:** 650°F (343°C) for the rated loads shown.

**Ordering:** Specify figure number, load size, and pipe size. Strut assembly must be ordered separately. For Metric applications specify Figure M6410.

**NOTE:** This product is designed to function within a 10° cone of action and a 180° arc of loading. Loading beyond the cone or arc is not recommended.
