## **SSV: Product Info**

81 Inline Sampling Valves, full-port

PM 81 M.00 e March 2006

# Inline Sampling Valves SSV Series, full-port design

for safe and representative sampling of aggressive or even toxic liquids from pipelines or vessels – under pressure, without any process interruptions.

### **Modular Design**

Inline Sampling Valves SSV Series are available as DIN- or ANSI-valves, with standard deadman lever. The valves are distinguished by its dead-space-free design as well as the extremely short outlet way for the representative sample. Standard actuation by spring to close handwheel, optionally by deadman handlever.

The sturdy bodies are made of stainless steel casting 1.4408 (CF-8M) or optional with resistant linings such as PFA or PFA-AS (anti-static).

#### **Main Features**

- Unique, patented construction, no pressure drop, dead-space-free
- Full port design, easy cleaning
- Only one opening to the atmosphere
- High safety through double cone system
- Easy and safe operation by spring return handwheel or deadman handlever with integrated interlocking
- Fine dosing through simple stroke adjustment, even for smallest, representative samples
- All-purpose valve unit installation on large size pipelines, vessels etc.
- Modular mounting of options on valve unit
- Sizes DN25/40/50/80 PN16
- Face to face acc. to EN 558-1, range 1

#### **Options**

Needle adapter, bottle with septum, incl. safety basket, valve with deadmann lever

automated, with pneumatic actuator

#### Accessories

- Bodies with heating jacket, buttwelding ends (clamp, threads) etc.
- Needle adapter for bottle with septum
- Bottle support, adjustable
- Safety cabinet with inspection windows
- Flanges with groove
- Safety padlock
- Activated carbon filter
- Vertical adapter
- Metal safety basket

## **SSV: Technical Data, Construction**

81 Inline Sampling Valves, full-port

PM 81 M.01 e March 2006

### **Operating Conditions**

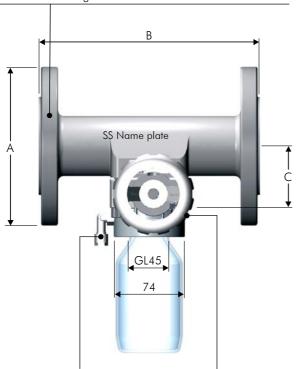

- $\bullet$  Temperature range from  $-10^{\circ}\text{C}$  up to  $+160^{\circ}\text{C}$  (depending on selected materials)
- Line pressure max. 16 bar

### **Testing / Marking**

- Pressure- and tightness testing acc. to EN 12266-1, leakage rate A, and spark testing at 35 kV to assure lining integrity. Marking of valves on body and name plate acc. to EN 19.
- Material- resp. test certificate acc. to EN 10204-3.1

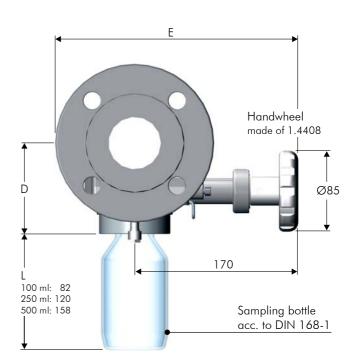

#### **Construction of Valve**

Body made of stainless steel casting 1.4408 (CF-8M) or with linings made of PFA or PFA-AS (anti-static), thickness min. 3 mm. Flanges acc. to EN 1092 or ASME B16.5

Bottle adapter made of PTFE glassfibre-reinforced, incl. vent connection

Valve block made of ss casting 1.4408 (CF-8M), valve seat of TFM and sealing cone of Perfluor elastomer

#### Technical Data Dimensions in mm

DN	<b>A</b> DIN	A ANSI	<b>B</b> DIN	<b>B</b> ansi	С	D	E	Kg*

### **SSV: Function**

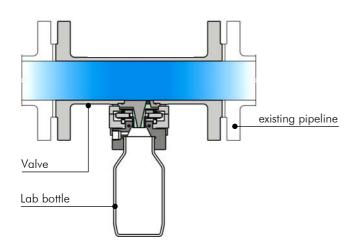

swiss fluid

81 Inline Sampling Valves, full-port

PM 81 M.02 e March 2006

#### **Operating Principle SSV Series** (Sampling under pressure, with bottle)

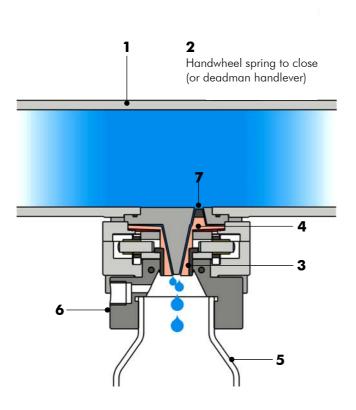

### Valve in closed position

The valve is installed into a horizontal pipeline. The line still provides full passage and allows easy cleaning at any time.

In closed valve position, the handwheel locked in its initial position by means of spring return.

In order to prevent any unauthorized operation, the handwheel (or deadman lever as an option) can be equipped with a safety padlock.

#### Valve in opened position for sampling

Liquid product flows through the valve (1). For taking out a sample, handwheel (2) is pulled out of coupling and subsequently operated counterclockwise.

Thus, the sealing unit (3) is pulled out of the conical seat (4). The representative sample flows through the generated annular gap into the lab bottle (5). Trapped air inside the bottle escapes through vent connection of the adapter (6).

As soon as the required sampling volume has been taken out, handwheel can be released and returns automatically in its initial position, locking in place again. During this operation, the sealing unit is pushed back into the seat and the valve is sealed through the sealing cone (7), dead-space-free.

In order to prevent exceeding of required volume or even overfilling of the bottle, particularly at high pressures sampling procedure has to be done very carefully.

Through simple stroke adjustment fine dosing is possible if required.

#### **Applications**

For critical applications such as vacuum service or at viscous resp. solids-containing media, the manufacturer has to be consulted. Special executions or use of a sampling ball valve will be considered as possible problem solving options.

# **SSV: Mounting Versions, Options**

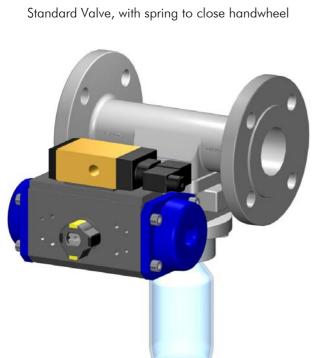

81 Inline Sampling Valves, full-port

PM 81 M.03 e March 2006

### **Valve Versions**

Automated, with pneum. quarter turn actuator

Standard Valve, with spring to close handlever

Sampling Ball Valve, with handlever, 90° turn

# **SSV: Mounting Versions, Options**

81 Inline Sampling Valves, full-port

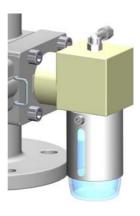

PM 81 M.03 e March 2006

## **Mounting Versions / Options**

Standard Valve, with 30° adapter

with vertical  $90^{\circ}$  adapter and protection tube

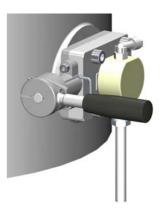

adjustable bottle support, spring loaded adapter

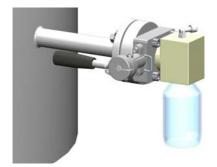

adjustable bottle support, spring loaded plate

Standard Valve, with adapter and safety basket

Valve Unit, direct mounting onto vessel, vert. Outlet

Valve Unit, mounting onto vessel flange, vert. adapter

Special Valve, with clamp on ss safety cabinet
